Handcrafted production of Gustave Bernardel Rosin - 1921

GUSTAVE BERNARDEL ROSIN : "VERITABLE" HANDCRAFTED AND NATURAL PRODUCT

From the 19th century, its unequalled purity offers the right "grab" for the best emission and quality of the sound.

Gustave BERNARDEL, famous French violin maker, invented his proper recipe at the beginning of the XXth century. Then, the secret process was transferred to the FRANCAIS family.

Thanks to our close relationship with the FRANÇAIS family, we were offered, by the two brothers Jean and Jacques (very well-known luthier in Paris and New-York) to continue the tradition.

Our commitments were to keep using the same raw materials and manufacturing process to respect the authenticity and the exceptional quality of the rosin.

The Gustave Bernardel rosin is now produced by CORELLI SAVAREZ in the same way : it is still handmade made, unit by unit.

It is made of naturel rosin from high quality selected pine trees, using the "galipot" (first sap of the tree). The componants of the recipe are very strictly controlled.

Perfectly homogeneous, it does not stick neither does it powder. The attack of the string is very clear and precise. The sound is easy to produce and control.

Thanks to its specific treatments, Gustave BERNARDEL rosin is ideal for any kind of weather.

Rosin for violin, viola and cello.

MORE INFORMATION

SOLEA

Fully innovative strings made of a new synthetic core. They are wound with a very new wire added to a different mix of wires. New machineries and production process have been developed to reach the highest level of performances.

ALLIANCE VIVACE

Strings wound on a very specific core made of FLUOROCARBON multifilament exclusive for CORELLI. The Fluorocarbon core (mineral origin) has the same elasticity, elongation, density as a gut core. Therefore, the sound belongs to the gut sound family but richer in harmonics. The strings last much longer as gut strings.

NEW CRYSTAL

The worldwide recognized strings by professional musicians are made of an improved STABILON polymer core wound with rigorously selected and controlled wires (Aluminium, Silver...). The mix of raw materials and the production process have been developed in order to improve all the characteristics of the full set, Focus and rich large sound, volume and projection.

DOUBLE BASS CORELLI TUNGSTEN

Corelli found the way to mix Tungsten wires with other metallic wires. Therefore, the strings are thinner and more flexible. The emission is easy and does not require much pressure. They offer a brilliant sound with a deep fundamental.

DOUBLE BASS CORELLI NICKEL

The construction of the strings is more traditional and allows an usual diameter requiring the usual pressure of the bow. The richer sound makes them very performant for classical and jazz music.
